

## FIRST WEEK

Harvest everlasting such as celosia and globe amaranth.

## SECOND WEEK

Watch for spider lilies. The blossoms will be emerging now so be careful not to cut them off.

## THIRD WEEK

Prune hybrid tea roses.

Start harvesting muscadine now through October.

## FOURTH WEEK

Apply brown patch control.

*Lagniappe*

## POTPOURRI RECIPE

- 1-1/2 teaspoons ground cinnamon
- 1-1/2 teaspoons ground orris root
- 3 to 4 cloves
- 1 drop patchouli oil, optional
- 6 drops rose oil
- 2 drops lavender oil
- 4 cups dried flowers

Experiment with this formula. Throw in dried slivers of orange or lemon peel. Include a few fragrant leaves like camphor or fresh bay. Try a few fragrant seeds too.

Rose petals are a must. Be sure to dry first before adding to your potpourri or it will mildew. Pastels look better dried. Add pressed brightly colored flowers even if they are scentless. Pansies are a favorite.

The orris root serves as a fixative. Otherwise the scent deteriorates within a few months. It can be found in most craft shops.

TREES AND  
SHRUBS

Althea  
Crape Myrtle

*Plumbago, a native of South Africa, is a popular ornamental plant in warm temperate climates. It has a wide variety of uses such as foundation plantings, in borders, as color masses in beds, as a filler plant, as a formal or informal hedge or in patio containers. Plumbago is not a demanding plant, easy even for the novice gardener, and its long blooming season keeps color in the garden through the summer and into the fall.*
